

Uploading and Downloading Files

NOTE: This article is only applicable if you are using the RStudio IDE within a web browser (as opposed to using RStudio as a standalone desktop application).

Uploading Files

To upload datasets, scripts, or other files to RStudio Server you should take the following steps:

1. Switch to the **Files** pane
2. Navigate to the directory you wish to upload files into
3. Click the **Upload** toolbar button
4. Choose the file you wish to upload and press OK

Note that if you wish to upload several files or even an entire folder, you should first compress your files or folder into a zip file and then upload the zip file (when RStudio receives an uploaded zip file it automatically uncompresses it).

Downloading Files

To download files from RStudio Server you should take the following steps:

1. Switch to directory you want to download files from within the **Files** pane
2. Select the file(s) and/or folder(s) you want to download
3. Click **More -> Export** on the toolbar
4. You'll then be prompted with a default file name for the download. Either accept the default or specify a custom name then press OK.

Note that if you select multiple files or folders for download then RStudio compresses all of the files into a single zip archive for downloading.
